7.	FINANCIAL SUPPORT	27
8.	EXPENDITURE BREAKDOWN	30
9.	FACILITIES AND SPACE	33
10.	FUTURE DIRECTIONS AND NEEDS	34

1. SUMMARY OF MAJOR ACTIVITIES

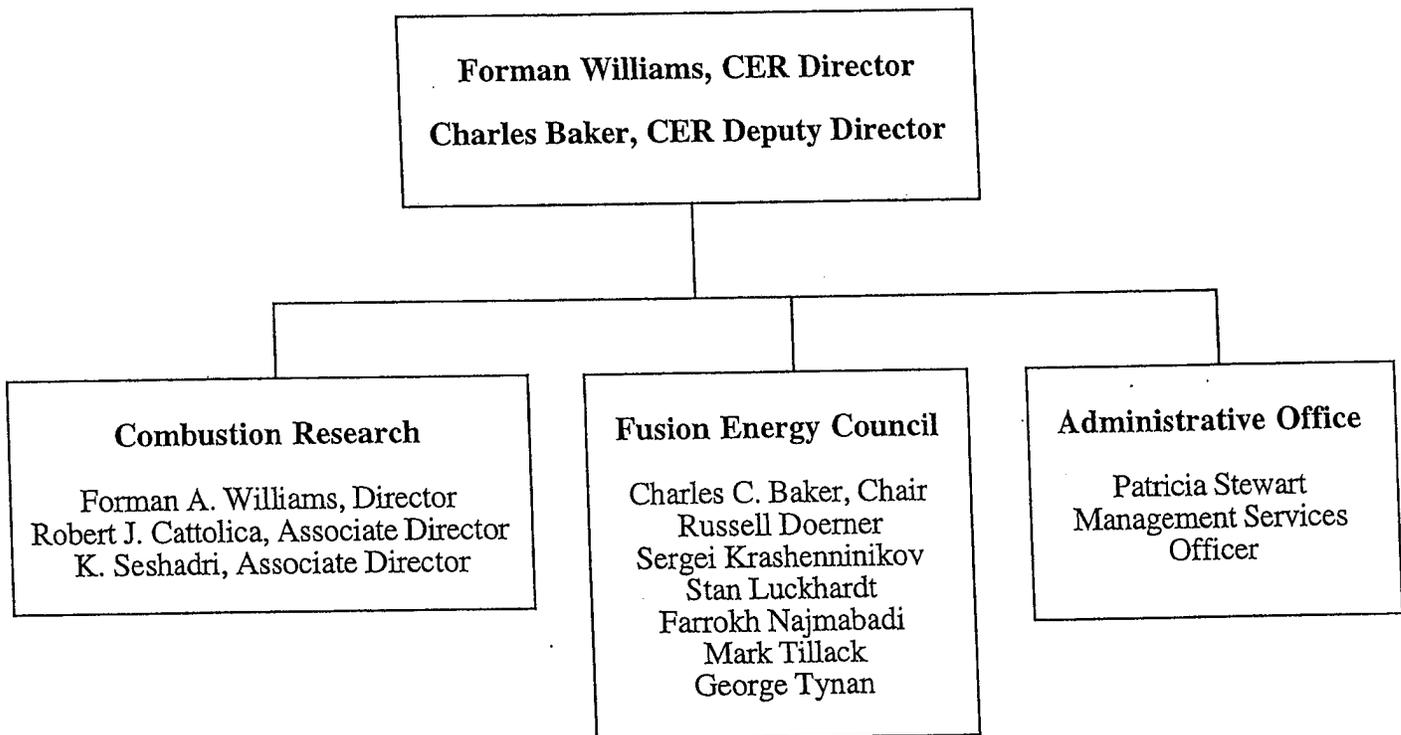

Studies were performed of energy problems in California, oil prices and the US strategic petroleum reserve, economic aspects of energy needs, long-term energy resources, and needs in moving towards a hydrogen economy. S.S. Penner, the original CER founder, was the major contributor to these studies. A CER newsletter was initiated, both web-based and in hard copy, disseminating this and other information generated in CER. In addition, CER hosted a number of US and foreign visitors in fusion, combustion and other energy areas and sponsored many lecture and seminars on topics related to these areas, as well as training graduate students. Among the outreach activities were displays and demonstrations on fusion energy at meetings of the American Physical Society. A meeting of the Western States Section of the Combustion Institute was hosted at UCSD, and international meetings in both the fusion and combustion areas were arranged and chaired by CER researchers.

CER activities in fusion energy and plasma science during this reporting period encompass a wide variety of leading research. The projects include plasma-material research using the PISCES experimental facility, participation in plasma confinement experiments at several institutions (e.g. General Atomics and the Princeton Plasma Physics Laboratory), development of plasma theory and models, national leadership of the study of advanced fusion power systems, experimental study of laser-matter interactions and national leadership of the U.S. Department of Energy's Virtual Laboratory for Technology. The fusion-related activities represent one of the largest and most diverse set of research efforts among universities in the U.S. The research activities include both magnetic and inertial fusion concepts, basic plasma science and technology and fundamental engineering science needed for fusion energy systems.

CER activities in combustion during this reporting period include research related to both propulsion and clean and efficient use of fossil fuels. A large project on pulse detonation engines was brought to fruition by demonstrating how such engines can best be designed and controlled and what chemistry needs to be addressed in initiating detonations in such engines. Advances were made in a number of microgravity combustion studies with NASA support, notably concerning droplet combustion and discovery of spiral flames. Chemical-kinetic characterization of ignition and extinction of combustion of both model and practical fuels was achieved. These various lines of research were supported by NASA, DOD and NSF. A website was established to make the San Diego chemical-kinetic mechanism for combustion readily available to the broad scientific community.

2. ORGANIZATION

The CER leadership is summarized in the following organization chart. Besides the administrative office that keeps the organization running smoothly, there is a fusion research council and a combustion research group. The members of these jointly discuss future directions and plan for future thrusts. They also consult with external advisors on an informal basis to evaluate past performance and possible new directions.

3. PERSONNEL

A. FACULTY

Faculty Members (active participation on a day-to-day basis)

Yousef Bahadori
Adjunct Associate Professor of Mechanical and Aerospace Engineering
PhD Engineering Physics

Charles C. Baker – Deputy Director
Adjunct Professor of Mechanical and Aerospace Engineering
PhD Nuclear Engineering

Robert J. Cattolica
Professor of Engineering Physics
PhD Engineering Physics

Alvin S. Gordon
Adjunct Professor of Engineering Chemistry
PhD Chemistry

Sergei Krashenninikov
Professor of Mechanical and Aerospace Engineering
PhD Physics and Mathematics

Paul A. Libby
Professor Emeritus of Fluid Mechanics
PhD Aeronautical Engineering

Farrokh Najmabadi
Professor of Electrical Engineering and Computer Science
PhD Nuclear Engineering

Stanford S. Penner
Professor Emeritus of Engineering Physics
PhD Physical Chemistry

Norbert Peters
Adjunct Professor of Mechanical Engineering
PhD Mechanical Engineering

K. Seshadri
Professor of Chemical Engineering and Fluid Mechanics
PhD Engineering Science

George R. Tynan
Associate Professor of Mechanical and Aerospace Engineering
PhD Engineering

Forman A. Williams - Director
Professor of Engineering Physics and Combustion
PhD Engineering Science

Affiliated Faculty Members (regular faculty who participate in some CER projects)

T. Bewley
Assistant Professor of Mechanical and Aerospace Engineering
PhD Mechanical Engineering

C. Caulfield
Associate Professor of Environmental Engineering
PhD Fluid Mechanics

M. Krstic
Professor of Mechanical and Aerospace Engineering
PhD Electrical Engineering

J.C. Lasheras
Professor of Fluid Mechanics
PhD Mechanical and Aerospace Engineering

P. Linden
Blasker Professor of Environmental Science and Engineering
PhD Applied Mathematics

D.R. Miller
Professor of Chemical Engineering
PhD Chemical Engineering

M. Meyers
Professor of Materials Science
PhD Physical Metallurgy

V.F. Nesterenko
PhD Physics
Professor of Materials Science

K. Nomura
Associate Professor of Mechanical Engineering
PhD Mechanical Engineering

S. Sarkar
Professor of Fluid Mechanics
PhD Mechanical Engineering

B. STUDENTS

GRADUATE STUDENTS

NAME	DATES	DEGREE
Advisor: S. Krasheninnikov		
Carlos Estrada-Mila	2001 - present	
Boris Frolov	2002 - present	
Guanghui Yu	2001 - present	
Advisor: S. Luckhardt		
Laizhong Cai	2001 - present	
Lina Li	2000 - present	
Andreas Liebscher	1997-2001	MS 1997
Zheng Yun	2002 - present	
Advisor: F. Najmabadi		
Sophia Chen	2001 - present	
Beau O'Shay	2001 - present	
Advisor: M.S. Tillack		
Dustin Blair	1996 - present	MS 1998
Brian Christensen	2002 - present	
Advisor: G. Tynan		
Michael Burin	1998 - present	
Larson Lindholm	2000-2002	MS 2002
Linh Pham	2002 - present	
Masahi Shimada	2000 - present	
Kurt Taylor	1999 - present	
Advisor: F.A. Williams		
Malissa Ackerman	1997 - present	
Craig Eastwood	1997 - 2002	PhD 2002
Tetsuo Hiraiwa	1997 - present	
Edward Olano	1998 - 2001	
Maria Petrova	2001 - present	
Li Qiao	2001 - 2002	
Frederick Redell	1999 - 2000	MS 2000
Priyank Saxena	2002 - present	
Tsutomo Shimizu	2002 - present	
Balachandar Varatharajan	1997 - 2001	PhD 2001
Christopher Varga	1997 - 2002	PhD 2002

POST-GRADUATE RESEARCHERS

NAME	DATES
Advisor: M.S. Tillack	
C. V. Bindhu	2001-present
A. C. Gaeris	2001-present
S. S. Harilal	2001-present
Advisor: G. Tynan	
Neal Crocker	2001-present
Advisor: F.A. Williams	
Bala Varatharajan	2001 - 2002
Alexander Telengator	2000 - present

C. RESEARCH PERSONNEL

Ghassan Antar
Assistant Research Scientist
PhD Physics

Matthew Baldwin
Assistant Research Scientist
PhD Physics and Materials Science

Jose Boedo
Research Scientist
PhD Physics

Russ Doerner
Associate Research Scientist
PhD Electrical Engineering

Zoran Dragojlovich
Assistant Research Scientist
PhD Mechanical Engineering

Sergei Galkin
Assistant Research Scientist
PhD Applied Mathematics

Douglas Gray
Associate Development Engineer
PhD Nuclear Engineering

Arthur Grossman
Senior Development Engineer
PhD Physics

Eric Hollmann
Assistant Research Scientist
PhD Physics

Sastry Indrakanti
Staff Research Associate
PhD Metallurgical Engineering and Materials Science

Shui-Chi Li
Associate Research Scientist
PhD Mechanical and Aerospace Engineering

Andreas Liebscher
Staff Research Associate
MS Physics

Stan Luckhardt
Research Scientist
PhD Physics

Kurt O. Lund
Associate Research Scientist
PhD Engineering Science

T. K. Mau
Research Scientist
PhD Electrical Engineering

Rick Moyer
Research Scientist
PhD Physics

Alexander Pigarov
Assistant Research Scientist
PhD Physics

John Pulsifer
Assistant Development Engineer
MS Engineering Sciences

Rene Raffray
Research Scientist
PhD Mechanical Engineering

Dimity Rudakov
Assistant Project Scientist
PhD Physics

Reinhard Seiser
Assistant Project Scientist
PhD Technical Sciences

Dai-Kai Sze
Visiting Research Scientist
PhD Chemical Engineering

Mark Tillack
Research Scientist
PhD Nuclear Engineering

Xueren Wang
Assistant Development Engineer
MS Physics

Mofreh Zaghoul
Assistant Development Engineer
PhD Physics

D. ENGINEERING AND TECHNICAL STAFF

Leo Chousal
Senior Development Engineer
B.S. Mechanical Engineering

Justin Delemus
Assistant EH&S Specialist
B.A. Physical Sciences

Rolando Hernandez
Associate Development Engineer
B.S. Electrical Engineering

Tyler Lynch
Junior Development Engineer
A.A. Automechanics

Glenn Mounce
Development Technician

Maggie Qu
Programmer Analyst
M.S. Physics, M.S. Science Education

Ray Seraydarian
Associate Development Engineer
M.S. Engineering Physics

Bruce Thomas
Assistant Development Engineer

E. ADMINISTRATIVE PERSONNEL

Nancy Bastian	Administrative Specialist	Fund Manager & Asst. to the Director
Claudia Hennessy	_Assistant III	Asst. to the Deputy Director
Ruth Lingo	Administrative Analyst	Financial Manager
Mary Olivarria	_Assistant III	Administrative Assistant
Patricia Stewart	Senior Administrative Analyst	Business Officer
Phyllis Voigts	Administrative Specialist	Contract and Grant Specialist
TBA	_Assistant II	Personnel Assistant

5. VISITORS AND SEMINARS

A. VISITING RESEARCHERS AND SCHOLARS

CER participants interact extensively abroad on energy and combustion issues. There is continuing joint research with investigators at various universities, research institutions and industries abroad and within this country. Renowned scientists from throughout the United States and abroad, specializing in energy, fusion, fission and combustion research, regularly visit UCSD and participate in CER programs through formal lectures, research activities and informal discussions. Visitors from 2001 and 2002 include:

VISITOR	AFFILIATION
Merete Bing-Jacobsen	Norwegian Institute of Technology
Nils P. Basse	Niels Bohr Institute, Copenhagen, Denmark
K.N.C. Bray	Cambridge University, Cambridge, England
Michel Champion	ENSMA, Futuroscope, France
Paul Clavin	CNRS - Universités d'Aix-Marseilles, Marseilles, France
Marcos Vera Coello	Universidad Politécnica de Madrid, Madrid, Spain
Bruno Coppi	Massachusetts Institute of Technology
Jill Dahlburg	General Atomics
Ben Eastlund	Novatron, Inc., San Diego
Junichi Furukawa	Tokyo Metropolitan College of Technology
Miguel Hermanns	Universidad Politécnica de Madrid, Madrid, Spain
Yoshi Hirooka	National Institute for Fusion Energy Science, Japan
Stefan Humer	Vienna University of Technology, Austria
Emil Hopfinger	Institut de Mécanique de Grenoble, Grenoble, France
Marianne Jensen	Norwegian Institute of Technology
Ryoichi Kurihara	JAERI Naka Fusion Research Establishment
Amable Liñán	Universidad Politécnica de Madrid, Madrid, Spain
Noriyasu Ohno	Nagoya University, Nagoya, Japan
Wolfgang Payer	Vienna University of Technology, Austria
Matt Peterson	Univ. of California, Washington DC office
Heinz Pitsch	RWTH Aachen, Aachen, Germany
Paul Ronney	University of Southern California

VISITOR	AFFILIATION
Takuya Saito	STA, Japan
Klaus Schmid	Max Planck Insitut-für Plasmaphysik, Garching, Germany
Tatiana Soboleva	Universidad Autonoma, Mexico
Al Sweedler	San Diego State University & San Diego Regional Energy Office
Bill Tang	Princeton Plasma Physics Laboratory
Kimitoshi Tanoue	Oita University, Oita, Japan
Kazutoshi Tokunaga	Kyushu University, Japan
Jorg Winter	Bochum University, Germany
Vlidiimir Zimont	CRS4, Italy and TsAGI, Russia

B. SEMINARS

CER sponsors a general series of seminars and public lectures in its areas of activities. A listing of these seminars is given in the following table.

SEMINAR SPEAKER	DATE	TOPIC
Mofreh Ramadan Zaghloul	July 24, 2000	"Physics of Nonideal Plasmas with Application to Electrothermal-Plasma Devices"
Vladimir Zimont	August 14, 2000	"Kolmogorov Methodology and Turbulent Premixed Combustion Modeling at Large Re and Da Numbers"
Amable Liñán	August 16, 2000	"Flame Flashback and Propagation of Premixed Flames near a Wall"
Paul Ronney	August 21, 2000	"Combustion in Microscale Heat-Recirculating Burners"
K.N.C. Bray	August 23, 2000	"Use of DNS Data to Test a Flamelet Model for Pressure Fluctuation Covariances in Premixed Turbulent Combustion"
Paul Clavin	August 25, 2000	"Gallopings Detonations Close to the C.J. Regime"
Forman A. Williams	August 28, 2000	"Chemical Effects in Counterflow Hydrocarbon Flame Structures"
Boris Khripunov	October 4, 2000	"Recent Experiments on Divertor Simulator, Lenta."
Chung Wu	November 9, 2000	"Hydrogen in Lithium and Its Separation from Liquid Lithium"
Hutch Neilson	November 20, 2000	"Compact Stellarator Research"
Mike Zarnstorff	February 6, 2001	"Compact Stellarators and the NCSX Project"
John Sethian	February 23, 2001	"KrF Lasers for Inertial Fusion Energy"
Roger Bohn	March 8, 2001	"California's Electricity Mess: Past and Future"
Robert Bitmead	April 18, 2001	"A Skeptical Introduction to Combustion Instability Modeling"
Zoran Dragojlovic	April 30, 2001	"Control of Convergence in a Computational Fluid Dynamics Algorithm Using Fuzzy Logic"

SEMINAR SPEAKER	DATE	TOPIC
Al Sweedler	May 18, 2001	"Energy Issues in the U.S.-Mexican Binational Region: Focus on California – Baja California"
Stewart Zweben	July 31, 2001	"Edge Turbulence Measurements in the C-MOD and NSTX Tokamaks"
K.N.C. Bray	August 13, 2001	"Vorticity in Unsteady Premixed Flames"
Emil Hopfinger	August 14, 2001	"Liquid Jet Breakup and Atomization by a High Velocity Gas Stream"
Mujid S. Kazimi	August 14, 2001	"Reinventing Nuclear Energy"
Paul Clavin	August 16, 2001	"Diamond Patterns in Cellular Fronts of Overdriven Detonations"
Amable Liñán	August 20, 2001	"Laminar Mixing in Diluted and Undiluted Fuel Jets Upstream from Lifted Diffusion Flames"
Marcos Vera Coello	August 24, 2001	"The Interaction of Vortices with Counterflow Reacting Layers"
Paul Ronney	August 27, 2001	"Premixed Flame Ignition by Corona Discharges"
Michael Shats	November 6, 2001	"Turbulence, Transport & Electric Field Studies on the H-1 Helimak"
Valery Godyak	March 22, 2002	"Nonlinear Effects in Inductive Discharges"

6. CONTRIBUTION TO UNDERGRADUATE AND GRADUATE TEACHING PROGRAMS

In addition to other teaching activities, CER personnel participated in teaching the following courses that are directly related to CER disciplines:

MAE 118A. Energy: Non-Nuclear Energy Technologies (4)

Oil recovery from tar sands and oil shale. Coal production, gasification, liquefaction. The hydrogen economy. Energy storage systems. Techniques for direct energy conversion. Solar energy utilization. Energy from windmills. Tidal and wave energy utilization. Hydroelectric power generation. Hydrothermal energy. Geothermal energy from hot rocks. Electrical power production, transmission, and distribution.

MAE118B. Energy: Nuclear Energy Technologies (4)

A brief survey of energy demands and resources. Available nuclear energy, background in atomic and nuclear physics; fission and fusion processes, physics of fission reactions-engineering aspects-safety and environmental effects, fusion-including laser fusion and magnetic confinement, and nuclear power economics.

MAE 118C. Introduction to Fusion Science and Technologies (4)

Overview of basic fusion processes, high-temperature plasma characteristics, and fusion power plant features. Reaction rates and energy balance for burning fusion plasmas. Survey of the enabling technologies for practical fusion and related applications outside of fusion, such as plasma-material interactions, plasma heating, high heat flux engineering, superconductivity, advanced materials, and nuclear technology.

MAE 211. Introduction to Combustion (4)

Fundamental aspects of flows of reactive gases, with emphasis on processes of combustion, including the relevant thermodynamics, chemical kinetics, fluid mechanics, and transport processes. Topics may include deflagrations, detonations, diffusion flames, ignition, extinction, and propellant combustion.

MAE 213. Mechanics of Propulsion (4)

Fluid mechanics, thermodynamics, and combustion processes involved in propulsion of aircraft and rockets by air-breathing engines, and solid and liquid propellant rocket engines; characteristics and matching of engine components; diffusers, compressors, combustors, turbines, pumps, nozzles.

MAE 220A. Physics of Gases (4)

Thermodynamics of gases for use in gasdynamics. Derivation of thermodynamic functions from statistical mechanics. Applications of classical and quantum statistical mechanics to chemical, thermal, and radiative properties of gases. Equilibrium and nonequilibrium radiation, chemical equilibrium, and elements of chemical kinetics. Laser and reacting-flow applications.

MAE 220B. Physical Gasdynamics (4)

Velocity distribution functions, the Boltzmann equation, moment equations and the Navier-Stokes equations. The dynamics of molecular collisions. The Chapman-Enskog expansion and transport coefficients: shear and bulk viscosity, heat conduction, molecular and thermal diffusion. Linearizations about equilibrium: applications to acoustics and supersonic flows with relaxation.

7. FINANCIAL SUPPORT

The following table summarizes the financial support of CER, listing the projects, funding agencies and funding levels. Nearly all of the support is extramural, most either directly or indirectly from the federal government, the majority of that from the Department of Energy (DOE). The annual budget has increased from about 9M to about 12M during the reporting period.

UCSD
Center for Energy Research
Grant Funding
 (Based on UC Fiscal year 7/01-6/02)

9. FACILITIES AND SPACE

CER is housed entirely in Engineering Building Unit II, (EBU2), which is also occupied by much of the Department of Mechanical and Aerospace Engineering (MAE) and some of the Department of Electrical and Computer Engineering (ECE). Much of the space occupied by CER is formally listed as belonging to MAE, and some to ECE. Laboratory space, which contains extensive experimental facilities, totals about 10,000 sq. ft. and comprises rooms B12, B14, B16, B17, B28 and B29, the last two of which are often listed as MAE space. All office and other space is located in parts of the third, fourth and fifth floors of EBU2.

The space for all offices is allocated per University guidelines: Faculty and senior research staff are given their own office, junior research scientists and engineers and postdoctoral students are housed two per office, and graduate students are housed three per office.

Professors and Emeriti who are members of the CER Combustion Research Program have their own office in EBU2. These offices are rooms 555, 556, 557, 558, 559, 560 and 562. These faculty house their graduate students, research scientists, staff and visitors in EBU2 rooms 556, 561, 562, 563 and 564. Laboratory space (some of which provides desk and office space for laboratory personnel) for the Combustion Research Program is located in rooms B12, B14, B16 and B17. All of the space of the Combustion Research Program is listed as belonging to CER but is administered cooperatively with MAE.

Professors who are members of the CER Fusion Energy Research Program and the Virtual Laboratory for Technology also have their own offices in EBU2. These offices are rooms L-309, 474, 464, and 457B. They have offices for their graduate students, research scientists and staff and visitors in EBU2 rooms 366, 357, 358, 359, 360, 361, 362, 363, 364, 365, 455, 456, 457, 457A, 458, 458A, 460, 465, 474, 475, all provided by MAE, with the exception of L-309, which is space provided by ECE. Laboratory space (some of which houses desks and office space for laboratory engineers and technicians) for the Fusion Energy Research Program is located in rooms: B12, B28, and B29. The Fusion Energy Program has a conference room that also houses its library, located in room 479.

CER administration space, occupied by financial and secretarial staff, is located in rooms 554, 565, 566 and L-309. The library of the Combustion Research Program also is housed in room 565.

There is presently no unoccupied space in the allotment given to the CER, and two additional senior scientists and four additional graduate students are expected before the end of the year. An allocation of more space for scientists and students is necessary for the effective operation of the CER in the future. In addition, proposals have been submitted for external funding of new research that would require extensive additional laboratory space. Consideration is being given to looking off campus for this space.

1. FUTURE DIRECTIONS AND NEEDS

CER intends to expand and improve its internationally recognized programs in combustion research and fusion energy. New thrusts planned in the combustion area pertain to environmental improvement through better knowledge of mechanisms of pollutant production in flames and through identification of surrogate fuels that can increase understanding of combustion mechanisms needed for enhancing efficiency. New thrusts planned in the fusion area pertain to achieving greater knowledge of laser-material interactions for improving prospects of inertial confinement and advancing knowledge of injection and boundary interactions for increasing purity and lifetime in magnetic confinement. Besides these plans for existing areas of research in CER, it is intended to explore possibilities for expanding activities into new directions, including alternative energy options and energy assessment.

To pursue these new directions in an effective manner, there is need for more collaboration with other departments and faculty and especially for more support from the campus. CER itself is in need of additional space for its research and its personnel, as well as additional core support for manpower, notably in the financial (accounting) and human-resources areas. The urgent needs for campus funding of support personnel could be achieved by increasing the ratio of campus support to external overhead brought in by CER (more than \$3M this year), up to values that are comparable with those of other ORUs. The space needs hopefully will be helped by freeing space in EBU2 when the new engineering building is occupied.
